Homework 9

Using Starknet.JS

Use the example code in this repo as boilerplate code

Install with

```
npm install
```

then run with

```
npm start
```

1. Go through the demo code, make sure you understand it.
2. Deploy the basic cairo contract from exercise 6 to the testnet and connect the app to it.
3. Add functions in the react app to interact with the basic cairo contract. Examples:

- increase balance by amount provided by user
- get balance for a certain block

4. (You can use a different contract if you prefer)
